

Praise for *From Cataloguing to Metadata Creation*

'From Cataloguing to Metadata Creation is an effective introduction to the theoretical and methodological basis for the creation of metadata, an activity fully embedded in the scientific and disciplinary field of cataloguing.

It charts the evolution of cataloguing in the modern world, up to and including the intersection with the methodologies of the Semantic Web and linked open data. In this environment the “relationship” between the described entities is not only pushed to its own maximum potential within a (bibliographic) catalogue, but also multiplies its information potential. Indeed, it projects itself into the web of data, where there are extraordinary opportunities to create and share further cultural production.'

Rosa Maiello, President, Italian Library Association

To Leonida, *my grandson*

New technologies will always underpin future generations of library catalogues. In order to maintain their role in providing information, serving users, and fulfilling their mission as cultural heritage and memory institutions, libraries must take a technological leap for the next generation; library bibliographic standards, models, and services, must be transformed to those of the Semantic Web.

Gordon Dunsire, Mirna Willer,
Bibliographic Information Organization in the Semantic Web

It is incumbent on us to 'listen to the colour of our dreams'. If we are not clear about our core values, no-one else can be expected to understand the purpose of what we do. There are grounds for optimism.

Alan Danskin,

About the Author

Mauro Guerrini is Professor of Library Science, Cataloguing, Metadata Creation and Classification, and Dean of the Masters on Cataloguing and Metadata Creation of Manuscript, Printed and Digital Resources at the University of Florence, Italy. He obtained the Diploma of Librarianship and the Diploma in the Conservation of Manuscripts at the School for Archivists and Librarians at the University of Rome La Sapienza, and later gained the Archivist's Certificate from the State Archive in Florence. Mauro is author of numerous publications on cataloguing, ethics, open access and the history of librarians, in particular Antonio Panizzi. He is a member of the editorial board of *Cataloging & Classification Quarterly*, *AIB Studi*, *Biblioteche Oggi*, and other journals, and Chair of the series *Libraries and Librarians* (Florence University Press); he is also Founder and Editor in Chief of *JLIS.it: Italian Journal of Library and Information Science*.

Mauro has been a Fellow of AIB (Italian Library Association) since 1979, AIB President (2005–11), Fellow of ABEI, SISBB, and member of other organisations. He was Chair of the AIB Section on Cataloguing, member of the IFLA ISBD Review Group, IFLA Cataloguing Section, Subject Analysis and Bibliography Sections. He was President of the Italian National Committee of IFLA Congress 2009, Chair of the 2021 International Conference on Electronic Resources, 2003 International Conference on Authority Control, 2012 Global Interoperability and Linked Data in Libraries and 2022 International Conference Bibliographic Control in the Digital Ecosystem.

Prefaces

by Barbara B. Tillett and Peter Lor

Cataloguing standards, rules and guidelines have changed through the ages from individual instructions for individual libraries to now internationally shared guidance built for the international exchange of bibliographic data. This work by Professor Guerrini provides an overview of the changes that have taken place in cataloguing standards and the great work of shared standards of international organisations, primarily the International Federation of Library Associations and Institutions (IFLA), towards reaching that ideal of 'universal bibliographic control'. Even universal bibliographic control is a concept that continues to evolve as the capabilities for documenting and sharing bibliographic data evolve.

At first, our technologies only allowed individual libraries to build their catalogues. Afterwards, the idea of creating copies of that cataloguing, such as in a book catalogue, emerged as printing developed. Technology advanced to enable printing catalogue cards to purchase from a centralised source when a library added holdings held by another library. We moved through several phases of automation from being able at first to exchange records in a standard format to later re-using data available internationally on the web or simply to link to existing data, wherever it resides.

Cataloguing is a costly operation, so the idea to share as much of that work as we can emerged early on. To share, we all need to use the same standards and compatible systems or at least to identify our data in such a way to enable its intelligent reuse. However, 'catalog it once for all' (Tillett, 1993) is not a new concept. It was a popular refrain at the beginning of the 20th century, as libraries endeavoured to share their cataloguing work. Systems like the Virtual International Authority File (VIAF) were built with the perspective of sharing the authority control activity. Data are being used for creative purposes, far beyond the original intent to identify the standard form of a name to be used in a catalogue, ready to enable any variant form of a name to access that entity.

So, as capabilities evolve, the focus of the cataloguing standards, guidelines and rules have evolved from building a bibliographic record to documenting

bibliographic data, identifying the described entity to enable users to *find, identify, select* and *obtain* the information they want. These are the objectives of *Functional Requirements for Bibliographic Records* (FRBR) along with the 'navigate' function incorporated into the *International Cataloguing Principles* (ICP) and *Resource Description and Access* (RDA).

This is the fascinating realm that Professor Guerrini explores through the following publication. And who among you will now take up the challenge to move us even further to help users get the information they want?

Barbara B. Tillett, PhD

In a conversation in a faculty meeting in a leading South African LIS school in the early 1980s, I ventured the opinion that cataloguing is a central competency of any librarian. This was greeted with derision. Since then, as a manager and researcher, I have observed the practical consequences of the drift away from all library-related things towards the 'harder' and more academically respectable discipline of information science. As an ineducable dinosaur, I remain convinced of the centrality of cataloguing in the information professions. You may not have to, or want to, catalogue, but some understanding of the principles of cataloguing is essential to almost any facet of information service. Cataloguing is not a refuge for shrinking violets or for pernicky, nit-picking, obsessive-compulsive types who become librarians because they don't like dealing with people. Cataloguing is for connecting people with resources. It is basic to the selection, acquisition/ingestion, storage, retrieval/discovery and availability of bibliographic resources of all kinds, ancient and modern, physical and virtual.

It is for this reason that I admire the work of my friend Mauro Guerrini and his Italian colleagues, who, in their teaching and research, not only give the subject the scholarly attention it deserves, but also publish guidelines and manuals for practising professionals and make the subject accessible to those of us who do not catalogue, but need to know what it involves and especially, why.

I count myself in the latter group. I was taught cataloguing in the mid-1960s, when the rules were set out in the *ALA Cataloging Rules for Author and Title Entries* of 1949, a revision of the 1908 *Cataloguing Rules*, which had been the result of a collaboration between the American Library Association and the (British) Library Association. This was a slim volume with a brick-red softcover. Roughly when I first started teaching in a library school, the 'blue code' was introduced: the *Anglo-American Cataloging Rules* (AACR) of 1967, a much thicker volume with a blue softcover. We were a small school and faculty members had to be jacks of all trades and I ended

up teaching a senior cataloguing course for which I had to master this new code. That was the extent of my cataloguing experience. AACR2 and all subsequent developments largely passed me by. Not entirely, though. Some years later as the director of a national library which compiled a national bibliography and a national union catalogue, I found our cataloguers embroiled in passionate debates about MARC formats, USMARC vs. UNIMARC vs. the now forgotten South African variant, SAMARC. I learned that differences between these formats had management and financial implications for our national bibliographic functions and that turf disputes about authority control (which institution had the best cataloguers?) required diplomatic handling.

All of these issues had a significant international dimension. During the 1980s and 1990s I was involved in IFLA's Universal Bibliographic Control (UBC) and Universal Availability of Publications (UAP) programmes. Cataloguing and cataloguing standards featured prominently among the nuts and bolts of these ambitious international schemes for sharing bibliographic records and for document supply. Indeed, from my vantage point as a student and teacher of international and comparative librarianship, I appreciate that in this volume Mauro illustrates how very important both the international exchange of ideas and formal international co-operation have been in the development of contemporary cataloguing theory and principles.

Looking back at my own experience, I think that the negative reputation that cataloguing acquired among many LIS students and professionals in the past may be the result of what was taught and how. We were taught the rules. Notably absent from the syllabus in my time was the conceptual basis of cataloguing – the philosophy and principles underlying the rules. To these this book offers a concise and lucid introduction, well supplied with examples and references. Reading it filled in for me many gaps in my understanding of contemporary cataloguing and how it evolved to where we are today. It is also a very useful contribution to the study of international and comparative librarianship and information work.

Peter Lor, DPhil

Acknowledgements

The volume is a revised and updated text of the second edition of *Dalla Catalogazione alla Metadattazione: tracce di un percorso*, Roma: Associazione Italiana Biblioteche, 2022.

Barbara B. Tillett commented on the text and revised it with her competence; to Barbara my extreme gratitude for her help. Thanks to Akbari Darian for her important suggestions. Thanks to Dorothy McGarry, Peter Lor and Thomas Bourke, who kindly read and commented on the text and suggested improvements. Thanks to Pierluigi Feliciati and Lapo Ghiringhelli for their help. Denise Biagiotti and Laura Manzoni were valuable and competent interlocutors throughout the editorial process of the volume. In particular, Denise Biagiotti is the author of Section 2.3, 'Metadata: a polysemantic term'; Laura Manzoni is the author of Sections 5.2 'Relationships' and 5.5, 'Entity identifiers' and Chapter 7, 'RDA: Some Basics'.
